- ❖ **Product description:**

Cedar oil, pine resin, cedar core paste cedar, cranberry powder in self Harney, forest mushrooms, dried, salted and pickled, jams from wild berries, dandelions and young pine cones.

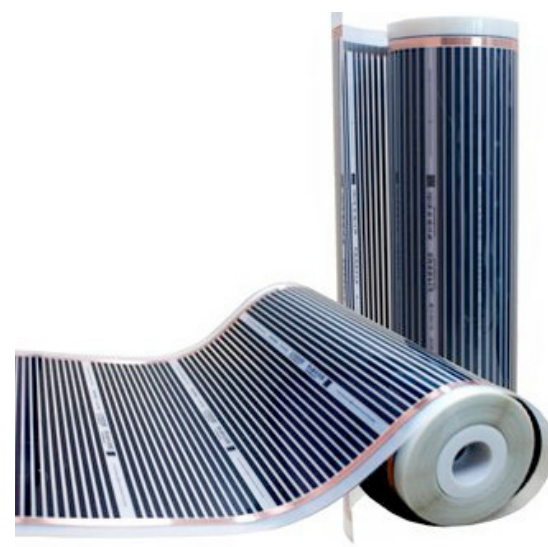

## PE Usovchikov E.N.

- The personal entrepreneur is engaged in the production of ceiling and floor radiant film heaters ECO-200 and plane heating panels.

The film ceiling heater «ECO-200» returns to the natural principle of heat exchange. In nature, the thermal energy of the sun is transmitted with infrared rays, which warm the earth, giving it its heat, and the air is already warming up from the ground. On the same principle, the film ceiling heating system is also based. The heat flow from its heating elements is directly transferred to the floor surface and interior items, and already from them the air in the room is heated. With this scheme, the temperature on the surface of the heating elements does not exceed + 45 C, the humidity in the room remains natural, and the floor and walls are warmer than air, which is much more comfortable for the health than heated overdried air under the ceiling and cold floor, as is usually the case with traditional heating systems. When the air temperature set on the thermostat is reached, the power supply of the system is automatically switched off, and after a one-degree drop in temperature, it turns on again. During the period of inactivity (which significantly exceeds the operating time), the system does not consume electricity, and, therefore, saves the money of the owner of the house or apartment.

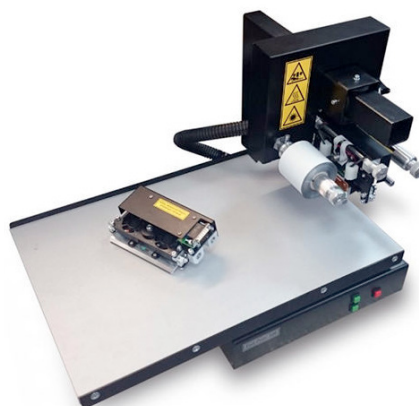

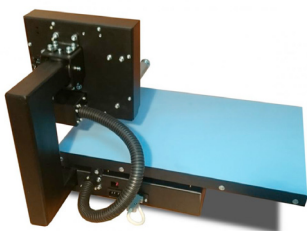

## Virshke, LLC

- The company from Khanty-Mansiysk Autonomous Okrug — Ugra produces specialized printing equipment: digital hot foil printing machine. The company is one of the 4 producers in the world, who producing such equipment.
